

Ashish Munot

Senior Software Engineer · Full-Stack & AI Systems

+91-7875188026 | ashish.munot22@gmail.com | [GitHub](#) | [LinkedIn](#)

Full-stack engineer with 4+ years of enterprise experience, now operating at the intersection of product engineering and AI systems. Delivered LLM-integrated pipelines and developer tooling in production at TDG, building on TypeScript, React, NestJS, and SQL Server.

Skills

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Vite, Redux Toolkit, MUI, SCSS, PWA, WebSocket

Backend: NestJS, Node.js, REST APIs, GraphQL

Databases: SQL Server, PostgreSQL

AI & Tooling: Git, Azure DevOps, Jest, Figma, Claude API, LangChain, Vercel AI SDK, MCP Integration

Experience

Senior Software Engineer at TDG

[Feb 2025 – Present]

- Lead engineering delivery across a 6-member core team within an 84-member product organization, conducting code reviews, enforcing standards, and mentoring engineers on TypeScript, NestJS, and SQL Server best practices.
- Collaborate directly with product and business stakeholders to translate requirements into technical architecture — driving system design decisions across HRMS modules serving **154 enterprise clients and 450,000+ employees**.
- Introduced Claude Code + MCP Server integration (Azure DevOps + SQL Server) to the engineering team — presented the tooling internally and drove adoption of AI-assisted developer workflows.

Frontend Developer at Revivo Technologies

[Mar 2023 – Feb 2025]

- Led full-stack development of a Booking system for over 500 hotel clients, streamlining operations to handle an average of 5,000 bookings per hotel each month, which resulted in a 40% reduction in processing time.
- Architected user and role-based permission systems, improving platform security by 25% to 40%.
- Engineered a **custom Booking engine (OTA)** for an individual client using **TypeScript, React, and Vite**, handling over **500** transactions monthly and increasing client satisfaction by **20%**.
- Integrated **Razorpay** for seamless and secure payment processing, which elevated payment success rates by **15%** and helped the hotel client save 10% to 15% per booking in commission fees.
- Built and deployed a comprehensive Point of Sale (POS) for restaurant users, streamlining order management and transactions, resulting in a 30% increase in operational efficiency.
- Strengthened application reliability through comprehensive Jest testing of core features, resulting in a 35% reduction in post-deployment bugs.
- Developed the platform's mobile version using PWA (Progressive Web App), leading to a 30% increase in mobile user engagement and a 10% rise in overall platform usage.

System Engineer at Infosys

[Feb 2022 – Feb 2023]

- Developed and enhanced a pharmaceutical software platform for Novartis AG, collaborating with interdisciplinary teams to deliver high-quality software solutions that improved platform efficiency by 15%.
- Facilitated the creation and maintenance of detailed documentation for over 50 application features and enhancements, ensuring smooth knowledge transfer and project continuity.

Projects

HOTELX – Hotel Management Software

- Created an intuitive and responsive frontend using React.js and Redux, facilitating seamless user interactions for hotel staff and guests, resulting in a 20% increase in user satisfaction.
- Integrated third-party Channel Manager APIs for real-time synchronization of rates and availability, leading to a **36% reduction** in overbooking incidents.

Education

Bachelor of Engineering

[Aug 2017 – Aug 2021]
